

# Developer Report

# Scan of http://rameehotelsindia.com:80/

## Scan details

Scan information	
Start time	13-03-2015 12:31:27
Finish time	The scan was aborted
Scan time	2 hours, 27 minutes
Profile	Default

Server information	
Responsive	True
Server banner	Microsoft-IIS/6.0
Server OS	Windows
Server technologies	ASP.NET

## Threat level

### Acunetix Threat Level 3

One or more high-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

## Alerts distribution

<b>Total alerts found</b>	203

# Alert details

## Blind SQL Injection

Severity	High
Type	Validation
Reported by module	Scripting (Blind_Sql_Injection.script)

### Description

This script is possibly vulnerable to SQL Injection attacks.

SQL injection is a vulnerability that allows an attacker to alter back-end SQL statements by manipulating the user input. An SQL injection occurs when web applications accept user input that is directly placed into a SQL statement and doesn't properly filter out dangerous characters.

This is one of the most common application layer attacks currently being used on the Internet. Despite the fact that it is relatively easy to protect against, there is a large number of web applications vulnerable.

### Impact

An attacker may execute arbitrary SQL statements on the vulnerable system. This may compromise the integrity of your database and/or expose sensitive information.

Depending on the back-end database in use, SQL injection vulnerabilities lead to varying levels of data/system access for the attacker. It may be possible to not only manipulate existing queries, but to UNION in arbitrary data, use sub selects, or append additional queries. In some cases, it may be possible to read in or write out to files, or to execute shell commands on the underlying operating system.

Certain SQL Servers such as Microsoft SQL Server contain stored and extended procedures (database server functions). If an attacker can obtain access to these procedures it may be possible to compromise the entire machine.

### Recommendation

Your script should filter metacharacters from user input.  
Check detailed information for more information about fixing this vulnerability.

## Application error message

Severity	Medium
Type	Validation
Reported by module	Scripting (Error_Message.script)

### Description

This page contains an error/warning message that may disclose sensitive information. The message can also contain the location of the file that produced the unhandled exception.

This may be a false positive if the error message is found in documentation pages.

### Impact

The error messages may disclose sensitive information. This information can be used to launch further attacks.

### Recommendation

Review the source code for this script.

## ! ASP.NET error message

Severity	Medium
Type	Validation
Reported by module	Scripting (ASP_NET_Error_Message.script)

### Description

By requesting a specially crafted URL is possible to generate an ASP.NET error message. The message contains the complete stack trace and Microsoft .NET Framework Version.

### Impact

The error messages may disclose sensitive information. This information can be used to launch further attacks.

### Recommendation

Adjust web.config to enable custom errors for remote clients. Set customErrors mode to Off or RemoteOnly. customErrors is part of system.web Element. RemoteOnly specifies that custom errors are shown only to the remote clients, and that ASP.NET errors are shown to the local host. This is the default value.

```
<configuration>
  <system.web>
    <customErrors mode="RemoteOnly" />
  </system.web>
</configuration>
```

### References

[customErrors Element \(ASP.NET Settings Schema\)](#)

### Affected items

Web Server
Details
Error message pattern found: <title>Illegal characters in path.</title> Version information found: Microsoft .NET Framework Version:2.0.50727.3053; ASP.NET Version:2.0.50727.3053
Request headers
GET / ~.aspx HTTP/1.1 Host: rameehotelsindia.com Connection: Keep-alive Accept-Encoding: gzip,deflate User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/28.0.1500.63 Safari/537.36 Accept: */*

## AWStats script

Severity	<b>Medium</b>
Type	Configuration
Reported by module	Scripting (Web_Statistics.script)

### Description

AWStats is a free powerful and featureful tool that generates advanced web, streaming, ftp or mail server statistics, graphically. This log analyzer works as a CGI or from command line and shows you all possible information your log contains, in few graphical web pages.

It's recommended to restrict access to this directory as it may contain sensitive information (test scripts, administrative interfaces, session tokens sent via GET, ...). This kind of information may help an attacker to learn more about the structure of your website and can be used to conduct further attacks.

### Impact

Possible sensitive information disclosure.

### Recommendation

Restrict (or password protect) the access to directory or make it accessible only on the local interface.

### References

[AWStats Security](#)

### Affected items

<b>/awstats/awstats.pl</b>
Details
No details are available.
Request headers
GET /awstats/awstats.pl HTTP/1.1 Cookie: ASP.NET_SessionId=1nckwcmjygetkveaihw5155 Host: rameehotelsindia.com Connection: Keep-alive Accept-Encoding: gzip,deflate User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/28.0.1500.63 Safari/537.36 Accept: */*

## ! Unencrypted \_\_VIEWSTATE parameter

Severity	Medium
Type	Informational
Reported by module	Crawler

### Description

The \_\_VIEWSTATE parameter is not encrypted. To reduce the chance of someone intercepting the information stored in the ViewState, it is good design to encrypt the ViewState. To do this, set the machineKey validation type to 3DES. This instructs ASP.NET to encrypt the ViewState value using the Triple DES symmetric encryption algorithm.

### Impact

Possible sensitive information disclosure.

### Recommendation

Open Web.Config and add the following line under the <system.web> element:  
<machineKey validation="3DES"/>

## User credentials are sent in clear text

Severity	Medium
Type	Informational
Reported by module	Crawler

### Description

User credentials are transmitted over an unencrypted channel. This information should always be transferred via an encrypted channel (HTTPS) to avoid being intercepted by malicious users.

### Impact

A third party may be able to read the user credentials by intercepting an unencrypted HTTP connection.

### Recommendation

Because user credentials are considered sensitive information, should always be transferred to the server over an encrypted connection (HTTPS).

## ! Clickjacking: X-Frame-Options header missing

Severity	Low
Type	Configuration
Reported by module	Scripting (Clickjacking_X_Frame_Options.script)

### Description

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server didn't return an X-Frame-Options header which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page in a <frame> or <iframe>. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into other sites.

### Impact

The impact depends on the affected web application.

### Recommendation

Configure your web server to include an X-Frame-Options header. Consult Web references for more information about the possible values for this header.

### References

## File upload

Severity	<b>Low</b>
Type	Informational
Reported by module	Crawler

### Description

This page allows visitors to upload files to the server. Various web applications allow users to upload files (such as pictures, images, sounds, ...). Uploaded files may pose a significant risk if not handled correctly. A remote attacker could send a multipart/form-data POST request with a specially-crafted filename or mime type and execute arbitrary code.

### Impact

If the uploaded files are not safely checked an attacker may upload malicious files.

### Recommendation

Restrict file types accepted for upload: check the file extension and only allow certain files to be uploaded. Use a whitelist approach instead of a blacklist. Check for double extensions such as .php.png. Check for files without a filename like .htaccess (on ASP.NET, check for configuration files like web.config). Change the permissions on the upload folder so the files within it are not executable. If possible, rename the files that are uploaded.

## ! Login page password-guessing attack

Severity	Low
Type	Validation
Reported by module	Scripting (Html_Authentication_Audit.script)

### Description

A common threat web developers face is a password-guessing attack known as a brute force attack. A brute-force attack is an attempt to discover a password by systematically trying every possible combination of letters, numbers, and symbols until you discover the one correct combination that works.

This login page doesn't have any protection against password-guessing attacks (brute force attacks). It's recommended to implement some type of account lockout after a defined number of incorrect password attempts. Consult Web references for more information about fixing this problem.

### Impact

An attacker may attempt to discover a weak password by systematically trying every possible combination of letters, numbers, and symbols until it discovers the one correct combination that works.

### Recommendation

It's recommended to implement some type of account lockout after a defined number of incorrect password attempts.

### References

[Blocking Brute Force Attacks](#)

### Affected items

#### /weddinsevents.aspx

##### Details

The scanner tested 10 invalid credentials and no account lockout was detected.

## OPTIONS method is enabled

Severity	<b>Low</b>
Type	Validation
Reported by module	Scripting (Options_Server_Method.script)

### Description

HTTP OPTIONS method is enabled on this web server. The OPTIONS method provides a list of the methods that are supported by the web server, it represents a request for information about the communication options available on the request/response chain identified by the Request-URI.

### Impact

The OPTIONS method may expose sensitive information that may help an malicious user to prepare more advanced attacks.

### Recommendation

It's recommended to disable OPTIONS Method on the web server.

### References

## Session Cookie without Secure flag set

Severity	Low
Type	Informational
Reported by module	Crawler

### Description

This cookie does not have the Secure flag set. When a cookie is set with the Secure flag, it instructs the browser that the cookie can only be accessed over secure SSL channels. This is an important security protection for session cookies.

### Impact

None

### Recommendation

If possible, you should set the Secure flag for this cookie.

### Affected items

## Password type input with auto-complete enabled

Severity	Informational
Type	Informational
Reported by module	Crawler

### Description

When a new name and password is entered in a form and the form is submitted, the browser asks if the password should be saved. Thereafter when the form is displayed, the name and password are filled in automatically or are completed as the name is entered. An attacker with local access could obtain the cleartext password from the browser cache.

### Impact

Possible sensitive information disclosure

### Recommendation

The password auto-complete should be disabled in sensitive applications.  
To disable auto-complete, you may use a code similar to:  
<INPUT TYPE="password" AUTOCOMPLETE="off">

### Affected items
